Jon Siterlet

Philosophy

My goal with Digital 42 is to be the main point of contact for companies seeking to expand their technological borders. My expertise covers nearly every aspect of modern computing, allowing a company to leverage one resource to satisfy a majority of business needs. To accomplish this, I offer affordable, easy-to-use solutions that aren't burdened by technical overhead. More than anything, I want my clients to understand the various systems that help run their business, and this is reflected in the options I provide. If you're looking to eliminate the hassle and worry often associated with the digital world, I'm always happy to help!

Services

- Software consulting, including research, setup, and maintenance.
- Software development, specializing in web-based and mobile applications.
- Website development for personal, business, and eCommerce sites.
- Data security, integrity, and backup.
- Data retrieval and investigative forensics.
- Email hosting, including migration and security.
- Networking setup and security.
- Computer repair, both hardware and software.
- Custom hardware purchasing.

Education

- 2009 - 2011 Ferris State University, Software Engineering.
- 2011 - 2013 Western Michigan University, Computer Science
- 2009 - 2013 Grand Rapids Community College, General Studies.

Work Experience

2011 - present, Digital 42, Professional Software Consulting and Development

Started out as a part-time venture to write programs for sporting venues. Has grown into a full-time job helping companies with a variety of software and technological needs.

2011 - 2013, IT Administrator for Mindscape at Hanon-McKendry

Duties included server maintenance, network maintenance, customer support, quality assurance, programming and bug repair, and web development.

Expertise

- Proficient in all major operating systems: Windows, Mac, Linux, iOS, Android, and Chrome OS.
- Programming background including work in .NET (C# and VB), Java, Javascript, and other minor languages.
- Database development and design, including Microsoft SQL and MySQL.
- Graphic design and image manipulation.

A versatile guide to the world of technology.
